Subject Preferences of Fifth Grade Children

"Subject Preferences of Fifth Grade Children" is a cooperative study in which a number of graduate students have contributed to the total research project. It was facilitated through the cooperation of the New England School Development Council. This thesis is one of the studies in the project. Those completed and filed as graduate studies in June and August, 1948 were:

1. Subject Preferences in the Fifth Grade by Helen C. Blanchard
2. The Reliability of the Check List Used in the Study by Francis L. Thompson
3. An Analysis of Sex Differences in Fifth-Grade Children's Preferences for School Subjects by Eleanor M. Skahill
4. Preferences for Content, Skills, and Aesthetic Subjects in Five Communities by Ado Commito
5. Children's Evaluation of the Difficulty of Well-Liked School Subjects by Katherine M. Kinsley
6. Children's Evaluation of the Difficulty of Disliked School Subjects by Esther M. Sullivan
7. An Analysis of Fifth-Grade Pupils' Subject Preferences in Relation to Their Teachers' Preferences by Helen M. Sprague
8. High Morale Classrooms in the Subject Preference Study by George H. Englesby
9. An Analysis of the Influences of Intelligence and Age Differences Upon Fifth-Grade Children's Preferences for School Subjects by William L. Earley, Jr.

CHAPTER I

INTRODUCTION

Year after year children proceed through an educative process known as school, wherein they encounter courses of study in various fields of subject matter. Insofar as is known, there has been no significant research to show that any extensive study of children's subject preferences has been made heretofore. Ethel E. Holmes [1] reports on children's preferences for school subjects in her own elementary school, but has compiled no statistical data. Lane [2] made a study of the likes and dislikes of pupils from grade three to six in the seventy-four elementary schools of Los Angeles. Although his study contains findings of considerable interest, it is based on check lists administered within one school system only.

The present study has been undertaken to gather statistical data on pupil preferences for the subjects taught in grade five. By determining the type and scope of these pupil preferences, it would seem that something might be done to strengthen the weaknesses of the school curriculum; that the study might be applied to specific school

systems or classes, or at least lead to further research which might ultimately prove valuable in curriculum making. Much, of course, is dependent upon whether or not the data are significant when statistically analyzed.

This preference study involves 13,483 fifth grade pupils in sixty-five towns and cities. It was facilitated through the cooperation of the New England School Development Council, an affiliated group of school systems which has, for its primary objective, the study of problems common to all communities, and the advancement of public education in New England.

"Subject Preferences in the Fifth Grade" is, because of its size and scope, a cooperative study in which fifteen graduate students have contributed to the total research project.

A questionnaire (Fig.1) for each fifth grade pupil was sent out early in December, 1947 together with an instruction sheet to the classroom teacher (Fig.2). It will be noted that twelve subjects are listed on the questionnaire. Four of the twelve subjects have dual terminology. This was done to simplify interpretation for the pupil by giving the familar name of the subject, since in some schools Language is called English, Penmanship is Handwriting, Art is Drawing, and Science is Nature Study. Health Education was not intended to include Physical Education. Geography and History are listed, as well as Social Studies, since some towns have only Social Studies while others have the separate subjects of Geography and History within this area.

systems or classes, or at least lead to further research which might ultimately prove valuable in curriculum making. Much, of course, is dependent upon whether or not the data are significant when statistically analyzed.

This preference study involves 12,423 fifth grade pupils in sixty-five towns and cities. It was facilitated through the cooperation of the New England School Development Council, an affiliated group of school systems which has, for its primary objective, the study of problems common to all communities, and the advancement of public education in New England.

SUBJECT PREFERENCES IN THE FIFTH GRADE

A Cooperative Study Being Carried On in New England Towns and Cities

1. Before the check lists are marked by the pupils the teacher should cross out the subject or subjects that do not apply to her school system. E.G., if your pupils have Social Studies cross out History and Geography; if they are used to calling a subject Art cross out Drawing, or vice versa; cross out either Language or English, etc.

2. Go over the directions on the check-list carefully with the children. Answer any questions any child may ask as long as your answer does not influence his choices in any way.

3. Pupils should use pencils making their marks distinctly.

4. No child should omit any part of the check-list that applies to any subject he has in school. It would be helpful to the investigation if you would check to see that there are no omissions.

5. Do not be surprised to find that there will be highly individual reactions as to favorite subjects, likes and dislikes, and degree of difficulty.

6. When the papers are collected, fill in the information called for at the bottom of this sheet, and PLACE THIS SHEET on top of the children's papers. Put an elastic or string around the bundle.

7. Return the papers to the person indicated by the directions given you when you received them through the Office of the Superintendent of Schools.

Teacher's Name _____

Teacher's Name _____

School _____

Town or City _____ State _____

Which subject do you most enjoy teaching? _____

Before the check lists were marked by pupils, the teacher, following her instruction sheet, crossed out the subject or subjects that did not apply to her school system. E.g., if her pupils had Social Studies she crossed out History and Geography; if the class were used to calling a subject Art, she crossed out Drawing, or vice versa. Thus, accurate checking was insured by giving the pupils the familiar name of subjects. Whereas most of the classes marked either Social Studies or History and Geography, a few classes marked all three.

Upon the return of these questionnaires, tabulations were made only on those where instructions had been accurately followed. All other forms were discarded. Despite the careful instructions to the teachers, and of the teachers to the pupils, some errors were made, but the percentage of discards was negligibly small, considering the thousands involved.

Each research worker has contributed significant analyses and findings based on the questionnaires, yet the possibilities for further studies have not been exhausted and more will be developed. Perhaps the studies not yet made may prove of greater importance to education than these initial attempts to gather and interpret data on pupil preferences. At any rate, the results of this survey of the subject preferences of 13,483 fifth-grade pupils have furnished considerable information which had not previously been available to educators, and have already given rise to new problems for further research.

Before the check lists were marked by pupils, the teacher, following her instruction sheet, crossed out the subject or subjects that did not apply to her school system. E.g., if her pupils had Social Studies she crossed out History and Geography; if the class were used to calling a subject Art, she crossed out Drawing, or vice versa. Whereas most of the classes marked either Social Studies or History and Geography, a few classes marked all three.

Upon the return of these questionnaires, tabulations were made only on those where instructions had been accurately followed. All other forms were discarded. Despite the several instructions to the teachers, and of the teachers to the pupils, some errors were made, but the percentage of discards was negligibly small, considering the thousands involved.

Each research worker has contributed significant analyses and findings based on the questionnaires, yet the possibilities for further studies have not been exhausted and more will be developed. Perhaps the studies not yet made may prove of greater importance to education than these initial attempts to gather and interpret data on pupil preferences. At any rate, the results of this survey of the subject preferences of 13,453 fifth-grade pupils have furnished considerable information which had not previously been available to educators, and have already given rise to new problems for further research.

CHAPTER II

SUBJECT PREFERENCES

The first step in reporting the data of a research study of any magnitude is to organize those basic data in as simple a form as possible that the reader may have some concept of their scope. A considerable amount of statistical information is available within the forty-four tables which accompany this part of the study of Subject Preferences in the Fifth Grade. The multiplicity of data affords opportunity for innumerable comparisons, analyses, and suggestions for further research. Studies based on these figures are a part of this cooperative project and are included in successive chapters.

Tables I through XII give the numbers and percentages of the 13,483 pupils' first, second, and third choices in each of the twelve subjects listed in the questionnaire for all of the 65 towns and cities. Tables XIII through XXIV give the numbers and percentages for each of the choices in all towns and cities for the 6932 boys. Tables XXV through XXXVI do the same for the 6551 girls. The data for these tables were compiled from tabulations of Column I of the pupil questionnaire.

Analysis of data in Column II and Column III, as well as an analysis of the subjects which teachers most enjoy teaching will be found in subsequent chapters.

CHAPTER II

Total number of First - Second - Third Choices of Girls - - - - - - 593

Percentage of 6551 Girls making HEALTH EDUCATION a First,

Second or Third Choice - 3.02

Tables XXXVII shows the rank order of subject preferences of the 13,483 pupils in the total study by giving the number, and percentage of the whole, for the combined first, second, and third choices in each subject. Included also is this same information for the 6932 boys and the 6551 girls.

Tables XXXVIII through XL show the significance of the differences between percentages of combined first, second, and third choices of the various subject preferences of the total group, and of boys and girls separately, using the statistical technique of the critical ratio.

Since a significant difference statistically determines the trend of a group, the critical ratio of the difference of the percentages has been used as the most satisfactory instrument for analysis of the data. To determine the significance of the difference between any two percentages, the formula for finding the critical ratio (CR), when the two percentages are expressed by P_1 and P_2, is:

$$CR = \frac{P_1 - P_2}{SE_{Diff_{P_1 P_2}}}$$

The standard of error of a difference between two percentages is found by use of the formula:

$$SE_{Diff_{P_1 P_2}} = \sqrt{SE_{P_1}^2 + SE_{P_2}^2}$$

In reference to the critical ratio and its implications,

Tables XXXVII shows the rank order of subject preferences of the 13,443 pupils in the total study by giving the number, and percentage of the whole, for the combined first, second, and third choices in each subject. Included also is this same information for the 6932 boys and the 6511 girls.

Tables XXXVIII through XL show the significance of the differences between percentages of combined first, second, and third choices of the various subject preferences of the total group, and of boys and girls separately, using the statistical techniques of the critical ratio.

Since a significant difference statistically determines the trend of a group, the critical ratio of the difference of the percentages has been used as the most satisfactory instrument for analysis of the data. To determine the significance of the difference between any two percentages, the formula for finding the critical ratio (CR), when the two percentages are expressed by P_1 and P_2, is:

$$CR = \frac{P_1 - P_2}{SE_{DIFF_{P_1 P_2}}}$$

The standard of error of a difference between two percentages is found by use of the formula:

$$SE_{DIFF_{P_1 P_2}} = \sqrt{SE^2_{P_1} + SE^2_{P_2}}$$

In reference to the critical ratio and the significance,

Wert[3/] says:

> Whenever this ratio is unity, the chances are 68 in 100 that the difference is too great to be the result of sampling fluctuations; whenever this ratio is two, the chances are 95 out of 100 that the difference is too great to be the result of sampling fluctuations; whenever the ratio is three or more, it is a practical certainity that the difference is too great to be the result of sampling fluctuations.

As shown in Table XXXVIII, Reading ranks first in the combined first, second, and third choices of 13,483 fifth grade children and is likewise the first preference of boys and of girls within the same combined category. However, in tabulating first choices only, (Table XLI) it will be seen that Reading leads all subjects as the first preference of 13,384 pupils and remains the leading preference for girls, but drops to second place in the boys' preference. Boys prefer Arithmetic as a first choice by a margin of 68 or .99 of one per cent.

Reading is the favorite subject of fifth graders. It will be noted however, that Arithmetic follows closely, with a consistently low margin of difference in favor of Reading, except as the first preference of boys.

It is of interest too, that, throughout the study, Art ranks third in subject preference. As a first preference of the girls it remains third in rank order, (Table XLI) but drops to fifth place in the combined number of first, second and third choices. This is due

1/ James E. Wert, Educational Statistics (New York: McGraw Hill Book Co., Inc., 1938), p. 145.

Ward says[7]:

> Whenever this ratio is unity, the chances are 68 in 100 that the difference is too great to be the result of sampling fluctuations; whenever this ratio is two, the chances are 95 out of 100 that the difference is too great to be the result of sampling fluctuations; whenever the ratio is three or more, it is a mathematical certainty that the difference is too great to be the result of sampling fluctuations.

As shown in Table XXXVIII, Reading ranks first in the combined first, second, and third choices of 12,489 fifth grade children and is likewise the first preference of boys and of girls within the same combined category. However, in tabulating first choices only, (Table XLI) it will be seen that Reading leads all subjects as the first preference of 12,384 pupils and remains the leading preference for girls, but drops to second place in the boys' preference. Boys prefer Arithmetic as a first choice by a margin of 69 or .99 of one per cent.

Reading is the favorite subject of fifth graders. It will be noted however, that Arithmetic follows closely, with a considerably low margin of difference in favor of Reading, except as the first preference of boys.

It is of interest too, that, throughout the study, Art ranks third in subject preference. As a first preference of the girls it remains third in rank order, (Table XLI) but drops to fifth place in the combined number of first, second and third choices. This is due

[7] James E. Ward, Educational Statistics (New York: McGraw Hill Book Co., Inc., 1923), p. 145.

to the heavily weighted second and third choices in Spelling offsetting the first choices in Art. It appears somewhat of a pattern that boys preferred Arithmetic to the generally preferred Reading as a first choice, while girls preferred Spelling to the generally chosen Art. (Tables XXXVII, XLI).

Spelling ranks fifth as a first choice, but gains fourth place and even third place in the combined choices. This is explained by the proportionately larger number of pupils who made Spelling a second or a third choice, thus swelling the number of combined choices. This explanation follows wherever the subjects were second and third choices more frequently than first choices. Thus the tabulations in Table XXXVII show a tendency for certain subjects to gain a higher rank order of preference compared to Table XLI which tabulates only first choices.

A major point of interest is the place of Social Studies in the rank order of preferences. In Table XLI History and Geography have been combined with Social Studies due to the fact that in the towns and cities wherein the social studies are not designated as such, but as separate subjects of History and Geography, a child would necessarily mark History or Geography if either one were his first choice, whereas in towns and cities where History and Geography were not taught as separate subjects, a child would necessarily mark the designated term Social Studies if it were his first choice. Obviously this combination of History and Geography with Social Studies is possible in first choices only, and does not apply to

to the heavily weighted second and third choices in Spelling reflecting the first choices in Art. It appears somewhat of a pattern that boys preferred Arithmetic to the generally preferred Reading as a first choice, while girls preferred Spelling to the generally chosen Art. (Tables XXXVII, XIX).

Spelling ranks fifth as a first choice, but gains fourth place and even third place in the combined choices. This is explained by the proportionately larger number of pupils who made Spelling a second or a third choice, thus swelling the number of combined choices. This explanation follows wherever the subjects were second and third choices more frequently than first choices. Thus the tabulations in Table XXXVII show a tendency for certain subjects to gain a higher rank order of preference compared to Table XIX which tabulates only first choices.

A major point of interest is the place of Social Studies in the rank order of preferences. In Table XIX History and Geography have been combined with Social Studies due to the fact that in the towns and cities wherein the social studies are not designated as such, but as separate subjects of History and Geography, a child would necessarily mark History or Geography if either one were his first choice, whereas in towns and cities where History and Geography were not taught as separate subjects, a child would necessarily mark the designated term Social Studies if it were his first choice. Obviously this combination of History and Geography with Social Studies is possible in first choices only, and does not apply to

second and third choices, for the simple reason that if a child marked History as a first choice, he might also mark Geography as a second or even a third choice, whereas the child who marked Social Studies as a first choice had no opportunity to mark a second or a third choice in the Social Studies area.

Thus in Table XLI Social Studies is given a fairer and more favorable position than is possible in Table XXXVII, where, in each instance it drops four places in rank order of preference. With the possibility of History and Geography receiving two choices out of three, whereas Social Studies could receive but one choice in three, it is impossible to give a true picture of the Social Studies field in Table XXXVII. It is worth noting in this table of combined preferences that History ranks consistently higher than Social Studies, while Geography ranks consistently lower. This is a point favorable to History, since the same pupils who marked History as a preferred subject were equally free to mark Geography, and since Social Studies, in all likelihood had been crossed out according to the instruction sheet.

It is, perhaps, surprising to note that, in Tables XXXVII and XLI Science lies within the lower half of the rank order of preference. However, many of the questionnaires were returned with Science crossed off, indicating that in some schools it is not listed as a taught subject. Considering this, Science ranks well in comparison with Social Studies and Geography, which were also likely to be crossed out. As to Science, two findings are discernible from the

second and third choices, for the simple reason that if a child marked History as a first choice, he might also mark Geography as a second or even a third choice, whereas the child who marked Social Studies as a first choice had no opportunity to mark a second or a third choice in the Social Studies area.

Thus in Table XLI Social Studies is given a fairer and more favorable position than is possible in Table XXXVII, where, in each instance it drops four places in rank order of preference. With the possibility of History and Geography receiving two choices out of three, whereas Social Studies could receive but one choice in three, it is impossible to give a true picture of the Social Studies field in Table XXXVII. It is worth noting in this table of combined preferences that History ranks considerably higher than Social Studies, while Geography ranks considerably lower. This is a point favorable to History, since the same pupils who marked History as a preferred subject were usually free to mark Geography, and since Social Studies, in all likelihood had been crossed out according to the instruction sheet.

It is, perhaps, surprising to note that, in Tables XXXVII and XLI Science lies within the lower half of the rank order of preference. However, many of the questionnaires were returned with Science crossed off, indicating that in some schools it is not listed as a taught subject. Considering this, Science ranks well in comparison with Social Studies and Geography, which were also likely to be crossed out. As to Science, two findings are discernible from the

statistical tables: 1) Science is more generally preferred by boys, and, 2) there is a tendency toward higher percentages of preference for Science in the smaller school systems.

The extremely low rating of Language is the finding which gives greatest concern to those who worked on this study. Language not only has the lowest rating as a subject preference, - this low rating remains constant throughout the tabulation tables, and is extremely low in comparison with other low rated subjects. It must be borne in mind that Language is taught in every school system, therefore its extreme unpopularity, as shown in this study, should give cause for further research in this area.

This chapter has set up the data from Column I on the check list filled out by 13,483 fifth grade children in 65 New England towns and cities.

The findings disclosed in the tables herein show the type and scope of pupil preferences. Further analytical data will be found in the subsequent chapters contributed by other graduate students who took part in the study. The cooperative project, presumably the first of its kind, provides much data which may prove valuable to educators and which may ultimately lead to further research.
